MEMORANDUM FOR: OSA/Attention:

25X1

SUBJECT: Acquisition of UNIVAC 9200-II Computer

1. An evaluation of the UNIVAC 9200-II would indicate that you should be able to support your development phase with this computer. It is not clear that the full mission planning and support phase can be accomplished with this system. However, the system is expandable in core size and upward compatible with a series of small but more powerful UNIVAC processors. Therefore, the selection of the UNIVAC 9200 is technically solid.

2. This computer should meet your current systems requirements and provide an easy access to both OCS and However, the problem of interface to probably will require an eventual replacement of the computer currently located there. This will be necessary in any event, if a fully linked operational system is to be developed for planning, testing, and execution.
